

Match the Diet

Animals have different adaptations to help them survive and meet all their needs in the wild. One thing all animals need is to find food. Birds have different beaks depending on what they eat and other adaptations to help them find their food. Read about the adaptations of the birds and match them to their food.

Owl
Sharp talons (claws)
Scissor-like beak
Excellent vision and hearing

Pelican
Webbed feet
Expandable throat pouch

Parrot
