

# Protecting Penguins

Did you know that most penguin species don't actually live in Antarctica? Humboldt Penguins swim in cold oceans but they live on cliffs in South America! Fill in the blanks below with the correct information about the physical features that help these penguins live in this environment.

1. A penguin's body is shaped like a \_\_\_\_\_ to help them move through the water.
2. Penguins have a third eyelid that acts like goggles and helps them see while swimming in the \_\_\_\_\_.
3. Penguins have a dense coat of \_\_\_\_\_ that protects their skin from \_\_\_\_\_ water.
4. On their face, penguins have \_\_\_\_\_-colored skin patches that help them regulate their body \_\_\_\_\_.
5. A penguin's feet help them grip on to the rocky \_\_\_\_\_ that they live on.
