

# Animal Observer

Spend some time studying an animal. This can be a pet at home or a wild animal in your yard or neighborhood. Answer the following questions about the animal you're observing.

Information to know: Living things develop adaptations over time that help them survive in their environment. These adaptations are characteristics or behaviors, like a tiger's sharp claws or the migration of birds to avoid cold weather. When observing your animal, think about how its behavior and characteristics might be an adaptation that helps it survive.
